Edel Grass

Performance and leisure at centre stage

The dynamic world of synthetic turf products for sport, play and leisure is boundless and constantly changing! Challenging synthetic turf projects are taken on and brought to fruition all over the world by a company that has accumulated the necessary technical know-how over a period of more than 30 years. Edel Grass was there at the very beginning and enjoys world fame as a premium supplier of synthetic turf for both sport and leisure applications. Edel and its partners guarantee innovative and sustainable solutions when it comes to creating facilities where top performance and leisure take centre stage and talent is able to flourish.

This philosophy has resulted in an internationally operating organisation which, as well as producing and supplying synthetic turf systems via an extensive partner network, has extensive knowledge in the field of civil engineering and project management at its fingertips. Edel Grass completes turnkey projects all over the world for everything synthetic turf projects need and which meet the highest quality standards.

One of the most reliable partners in the industry

If it is for Soccer, Hockey, American Football, Baseball, Tennis, Multi-sports or Landscaping; our artificial grass solutions provide safety and ultimate playability to the users, as well as maintenance friendliness and durability to the owners, so maximising the value of

their investment. It is our philosophy not to be merely an artificial grass manufacturer, but to be an all-round company in the synthetic turf chain with all know-how assembled under one roof. We focus on performance and durability to supply innovative and sustainable solutions.

Preferred Producer

Edel Grass is a Preferred Producer for FIFA, WORLD RUGBY and FIH. We are proud to be one of the few companies worldwide, who are recognised as such by all 3 institutes. Whilst also our tennis, baseball and multi-sport solutions are extensively (lab) tested or certified to meet the required standards.

Key points

- Over 30 years experience in artificial grass applications for sports grounds and landscaping
- More than 5000 full-size football and hockey fields installed all over the world
- A financially stable company with experienced and loyal employees
- Specialist in sports grass systems, recreational grass (landscaping), design & construction
- Preferred producer for FIFA, FIH, WORLD RUGBY; several developed turf systems certified by ITF and MLB
- Customers worldwide recognise us as one of the most reliable and enjoyable companies to work with

Infill free soccer field Amersfoort **The Netherlands**

Infill free soccer systems

Low maintenance and permanent play

An infill free grass system offers a fair amount of all the playing characteristics found in filled systems. However they come with one big advantage, which is the lack of performance infill such as SBR, TPE, EPDM and/or cork.

Not having to fill the system with granulate, only occasionally with stabilizing sand, leads to fast and affordable installing possibilities. Logically this also leads to a deduction of maintaining costs worth mentioning.

When it comes to performance infill free soccer systems, Edel Grass offers a basic but wide applicable product range.

Applications

- Sport fields in education
- Training pitches
- Indoor & outdoor
- Urban environments
- Full size & small
- In every desired shape

Advantages

- Lower maintenance costs
- No granulate performance infill
- Minimal cleaning efforts
- Fast & easy snow removing
- No static electricity
- Perfect draining capacities

Health

- Safe to play for kids & adults
- Pleasant shock absorption
- Predictable movement response
- Optimal grip & torsion
- Odorless and fine dust free
- Environmental friendly

Lifelong quality

Our artificial grass products are designed to offer high quality use during their entire life span. We strive to deliver products that perform in any climate and can be played under the most challenging weather conditions.

We only use materials of the highest quality and work with suppliers that can meet to our demanding quality standards. To ensure our products are dimensionally stable we prevent them against disform and tear by using complex backing and diagonal glass reinforcements. To avoid weaknesses, we advice to install fields with a minimum of seams, integrated linings or using our special and proven glueing method.
