- Edel Grass Paddle Pro system is a multifunctional system which can also be used as a mini tennis court;
- Paddle is dynamic, easy to learn, sensational and really fun to watch;
- Paddle is an asset to any tennis club, fitness club or any other leisure facility.

## Edel Paddle Pro The multi-use tennis solution

Paddle has long been popular in Southern-America and Spain and is gaining ground in the rest of the world. Edel Grass has developed an all-weather paddle court which can be customized to every single location. Thanks to the playing performance, the system is also suitable for full size tennis pitches. The Edel Paddle Pro system is ITF Certified, which makes it a unique multi-use tennis solution.

The combination of the sub-base, yarn and infill results in a system with superb water permeability and uniform and predictable ball bounce. The Edel Paddle Pro system has to be installed on a stable, free draining base and will require relatively low maintenance. For optimal playing and slide conditions and perfect stability, sand infill is required.

For Edel Paddle Pro detailed technical specifications, please visit [www.edelgrass.com](http://www.edelgrass.com).

### Benefits of Edel Paddle Pro:

- Predictable ball bounce • Optimal playing and slide conditions • Proven quality, value for money • Maintenance friendly • All-weather solution • Perfectly suitable for multisport

## Edel Elite LSR Years of experience, proven quality

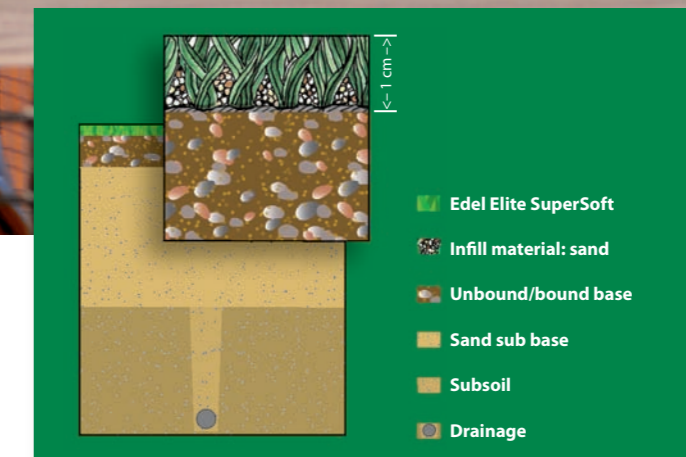

Sustainable, player-friendly and affordable. These qualities best characterize Edel Elite LSR tennis courts. The courts are installed on top of a structure designed according to the standards of national and international sports associations. On top of the stable foundation, we install the 20 mm Edel Elite LSR artificial grass top layer. Thanks to the LSR (Low Slide Resistance) yarn, you can play on the system (practically) the whole year through, and it retains its good playing characteristics and sliding resistance.

### Benefits of Edel Elite LSR:

- All weather availability for near year round usage • Uniform performance throughout the year • Player-friendly foundation (less stress on joints) • Low maintenance • No sprinklers or watering • Integrated play lines for consistent bounce even off the lines • Maximum service life • Suitable for indoor and outdoor use

LSR technology eliminates the need to completely fill the court with sand. This gives Edel Elite LSR an extremely comfortable feel. Players can easily pivot, turn and run with a reduced risk of injuries. Edel Elite LSR is available in olive green and clay red with white or yellow line markings.

## Edel Elite SuperSoft The surface of choice

For clubs wishing to distinguish themselves with a high specialised artificial grass optimised for tennis play and player comfort, Edel Elite SuperSoft uses a tightly woven, micro curled polyethylene fibre to provide a very even and non directional playing surface. The dense pile is semi sand filled, with the sand worked into the pile so that it is visually obscured. Play takes place on the carpet pile itself, which allows optimal pivoting and turning and with some resilience combines to make play more comfortable and the chance of playing an extra set an attractive prospect.

### Benefits of Edel Elite SuperSoft:

- All weather availability for near year round usage • Micro curled polyethylene pile for optimal player comfort • Obscured sand infill for reduced maintenance • Integrated play lines for consistent bounce even off the lines • No sprinklers or watering • Suitable for indoor or outdoor courts

Edel Elite SuperSoft when installed correctly on a stable base will require relatively low maintenance and provide an ITF Court Pace Rating 3. Available in two shades of green and terra cotta red, the playing surface can be installed in a single colour or with contrasting colours to the play and run off areas.
